SUMMARY

Computer Engineering student at the University of Rizal System seeking an OJT placement or entry-level role in Software Engineering, Full-Stack Development, QA/Software Testing, IT Support, or Network Engineering. Experienced in both software and hardware/network projects, from full-stack web apps and a published Roblox game to a home network monitor and an RFID-based system, with hands-on IT support experience through the SPES program.

EDUCATION

University of Rizal System, Antipolo *2023 – Present*

Bachelor of Science in Computer Engineering

- Relevant coursework: Data Structures & Algorithms, Operating Systems, Database Management Systems, Software Engineering, Web Development, Programming Languages, Network Configuration & Troubleshooting, Embedded Systems Fundamentals.

TECHNICAL SKILLS

Languages: Python, JavaScript, PHP, Lua, VB.NET, SQL
Frontend & Backend: React, Node.js, Laravel, Django, REST APIs
Databases & Cloud: MySQL, SQLite, Firebase
Networking: TCP/IP, Subnetting, DNS/DHCP, VLANs, Network Device Monitoring, Cisco Packet Tracer, Basic Network Troubleshooting
Tools & Platforms: Git, GitHub, VS Code, XAMPP, Cursor, Vite, MS Office, Google Workspace
Soft Skills: Teamwork, Adaptability, Problem-Solving, Technical Documentation

SELECTED PROJECTS

URSAC Simulation Academy *Feb 2026*

Roblox Game | Lua

- Designed and developed a full Roblox game simulating a university journey, including quest systems, player interactions, and core gameplay mechanics.
- Served as both builder and coder: constructed in-game environments and programmed the quest/education progression system.
- Published the game publicly and maintained it with weekly updates addressing bugs and player-reported issues.

Salo Sa Antipolo *Jan 2026*

JavaScript, Python, CSS, HTML, Firebase

- Developed a full-stack POS web application for a known Antipolo restaurant, covering order processing, payments, inventory, and daily sales reporting.
- Streamlined order-to-payment workflows and inventory tracking to improve transaction accuracy and efficiency.
- Prepared technical documentation, conducted client training, and completed a formal handover for production use.

Home Network Device Monitor

Python (standard library), SQLite

- Built a single-file network monitor that scans the full home subnet via parallel ping sweeps, discovering connected devices in seconds.
- Created a device-approval "stranger alarm" with real-time Telegram/Discord alerts to flag unauthorized or unrecognized connections.
- Added an internet-outage detector and SQLite history log that distinguish ISP from local failures and track device uptime, ping, packet loss, and jitter.

CineLookUp *Apr 2024*

React, Vite, Firebase, TMDb API

- Built a responsive movie lookup web app with search, movie details, and user favorites, using efficient API integration and client-side caching.
- Documented the application and deployed a demo for testing and user feedback.

EXPERIENCE

Special Program for Employment of Students *May 2026*

- Provided basic IT assistance and technical support to staff and office operations.
- Assisted with troubleshooting of computer hardware and software issues.
- Assisted in encoding and organizing resident records and maintaining digital files for the barangay office.

HACKATHONS & COMPETITIONS

KuryenteWatch *Oct 2026*

- Built a local-first household electricity tracker in 24 hours with a team during a remote Build Day, using AI-assisted development to design, ship, and demo the product.
- Implemented OCR to read electric meter and appliance label photos, then estimated monthly bills and per-appliance usage and flagged unusual jumps in consumption.
- Built an installable PWA with SQLite storage that works offline, keeping all user data on the device.

GCash Hackathon *Sept 2026*

- Built, designed, and pitched an AI-powered concept to digitize handwritten sales records for small business owners, with entry extraction and basic profit/loss summaries.
- Collaborated with classmates to develop a prototype and present to GCash judges, focusing on accessibility for non-technical users.

CERTIFICATIONS & TRAINING

Google Network Security *Aug 2026*

ORGANIZATIONS

For Girls Who Build PH *Oct 2026 to Present*

- A growing community empowering girls and women in technology through project-building, innovation, and community development.

Cisco NetConnect PUP – Manila *Oct 2026 to Present*

- Enterprise Networking Cadet
- Accepted member of the organization, recognized for dedication and potential in networking and technology.

Association of Concerned Computer Engineering Students *2023 – 2024*

- Member, Technical Team: supported technical operations and activities of the organization.
